### **Summit Expands Canadian Services with Vancouver and Toronto Data Centres**

*Service bureau offering ensures system reliability and uninterrupted operations for clients*

**Burnaby, BC, 23 November 2007** – As part of its continuing investment and long-term commitment to Canadian credit unions, Summit Information Systems, a business unit of Fiserv, Inc. (NASDAQ: FISV), announced today that Summit Financial Technologies Canada has established a data centre in Vancouver, BC, and is negotiating for a second data centre to be located in Toronto by year’s end. The data centres are part of Summit’s growing infrastructure to support service bureau and resource management delivery of iSpectrum, the only banking system built with 21<sup>st</sup> century Internet standards exclusively for Canadian credit unions. The technology and design of iSpectrum offers a level of performance, flexible functionality and efficiency previously unavailable to Canadian credit unions using service bureau delivery for their core processing.

With redundant hardware, the Summit Vancouver data centre has no single point of failure for supporting 24/7 operations and can offer Summit service bureau clients maximum system availability. The data centre is co-located with Bell Canada and taps directly into the main Internet pipeline for Western Canada, delivering the fastest, most reliable service available. Fiber optic connectivity ensures unparalleled speed, immunity to electrical interference, and increased data security. The Toronto data centre will function as the real-time backup and recovery facility for all Summit service bureau and resource

management clients. By locating data centres in different geographic regions, the Summit service bureau infrastructure provides additional system redundancy and uninterrupted service.

Summit recently opened its full service operations centre in Burnaby, BC. to run the two data centres and support Summit clients with in-house training, consulting, installations, product development, and delivery of many best-of-breed solutions from Fiserv business units.

“These data centres expand the range of personalized services Summit provides for Canadian credit unions. Summit clients have the latest technology, fastest data recovery and most reliable online banking system service in Canada,” said Clive Raheer, director of the Summit Burnaby operation centre. “Once fully deployed, the iSpectrum system will be continuously backed up to the Toronto data centre. In the event of a disaster, the credit union can use the browser interface to point to a different URL, and their data is available in seconds. There are no tapes to retrieve or reload. There is simply no legacy in the iSpectrum system.”

“Our Vancouver data centre has the latest, most advanced technology in place. Our entire way of operating and service delivery is all new,” said Kevin Sparks, president of Summit. “Credit unions know their data is safe and always available. Between the security features of iSpectrum and the unmatched reliability of the data centre, credit unions can focus less on data security and more on meeting their members’ financial needs.”

### **About Summit Information Systems and Summit Financial Technologies Canada**

For over 25 years Summit Information Systems has served the credit union industry as a leading provider of advanced technology and business innovations. The Summit iSpectrum banking system provides Canadian credit unions the most advanced technology available to help them succeed in today’s competitive financial services industry. Summit Financial Technologies Canada delivers iSpectrum services and client support via an operations office in Burnaby, BC and a data centre in Vancouver as part of Fiserv Solutions of Canada, Inc. Staffed with industry experts, the data centre supports license, service bureau/ASP and resource management delivery and service options of the iSpectrum banking system. As part of the Fiserv portfolio of best-of-breed solution providers, Summit brings to Canada a full suite of Fiserv products and services that seamlessly integrate with the iSpectrum banking system.
